

Noriday 28 supply issue

You will be getting a new brand temporarily

Due to an unexpected delay in sourcing the active ingredient, norethisterone, there is a supply issue affecting Noriday 28 Day oral contraceptive.

Pfizer, the supplier, has brought in their UK-branded Noriday 28 product.

This product is approved by Medsafe

Medsafe has reviewed this product and agreed that it can be sold until the New Zealand product is available again.

When will the New Zealand Noriday 28 be back?

The supplier, Pfizer, expects supply to return to normal by the end of December 2024. We will keep our website up to date.

New Noriday works the same way

This UK branded product has the same active ingredient in the same quantity. It will work the same as your usual contraceptive pill.

The only difference from your usual Noriday 28 is the packaging.

The foil of the blister pack will have days of the week printed on it, unlike your usual pack.
